

TENDER EVALUATION FOR GOVERNMENT ENTITIES

Rules decide.
AI assists.
Officers sign.

Screen every bid on a tender against the RFP's mandatory requirements, cross-check the shortlist with an AI that runs on your own servers, score as a committee — and award with a **signed record that stands up to audit.**

Bid screening

Supply of laptops, servers and network equipment · RFP

A fast first pass over every bid — are the documents there, is each requirement even mentioned, and is the price within the expected range — so a large field can be narrowed before the detailed AI check.

SCREEN OUT

Screening proposes; you decide. An excluded bid needs a written reason, is never ranked and needs no scores. Bids can be excluded only before the commercial envelopes are opened.

Decision

Reason (required to exclude)

Excluded

Tick every bid screened out

VENDOR	DOCUMENTS	PRICING	REQUIREMENTS LIKELY COVERED	SCREENING	DECISION
☐ Falconcrest Computing	Commercial Technical	3,360,000 AED	10/10	Shortlist	—
☐ Lantern Digital Trading	Commercial Technical	3,420,000 AED	10/10	Shortlist	—
☐ Bluewadi Systems LLC	Commercial Technical	3,495,000 AED	9/10 likely missing: R7	Shortlist	—
☐ Tidewater IT Trading	Commercial Technical	2,015,000 AED	9/10 likely missing: R7	Shortlist	—
☐ Amberline IT Supplies	Commercial Technical	1,930,000 AED	8/10 likely missing: R3, R4	Shortlist	—
☐ ...	Commercial Technical	2,245,000 AED	9/10	Shortlist	—

Bid screening on a fictional IT-equipment tender: 16 bids — 8 shortlisted, 4 for review, 4 screened out. Shown as the procurement officer sees it; the scoring committee sees every price sealed.

Runs on your servers,
AI model included.

Interface, notices and reports in both.

Verifiable offline with
your entity's key.

The portal collects the bids. Then the hard part starts.

An e-procurement portal is good at receiving submissions. Evaluating them is still slow, careful, manual work — and every decision has to hold up when a bidder complains or an auditor asks, sometimes months later.

100+

bids on a single tender — the scale BidGate is built for.

WHERE LARGE EVALUATIONS STRAIN

01

Checklists by hand

Officers read every proposal against every mandatory clause, in spreadsheets that change from one tender to the next.

02

Two readers, two answers

Judgement varies between evaluators, and a missing certificate found late can reopen work already done.

03

Prices that travel early

Once commercial figures reach the technical committee, the two-envelope principle holds only on paper.

04

Reasons that are hard to rebuild

When a bidder asks why they lost, the reasoning is spread across emails, files and memory.

What BidGate changes.

The same rules for every bid

Screening is rule-based: run it again on the same documents and it gives the same answer.

Evidence behind every call

Every automatic compliance call points to the clause, page and wording it relied on.

Prices sealed from the scorers

The technical committee never sees a price. Envelopes open only by a recorded decision.

A record that verifies itself

The award is signed with your entity's key and can be checked offline, years later.

Works beside your e-procurement portal

No portal integration project. Download the submissions from your portal and upload them to BidGate as one ZIP — a folder per bidder, holding their technical and commercial files.

Your portal

One ZIP

BidGate

From the portal's ZIP to a signed award

Seven steps, each with a clear owner. BidGate does the reading and the arithmetic; your people make the decisions.

Who acts: Officer Committee Approver BidGate rules Local AI

Rules decide. AI assists. Officers sign.

Every call BidGate makes can be explained — to a bidder who asks why, to an auditor, or to your own committee.

The rules decide

- Every pass/fail call is made by fixed rules in code — the same evidence always gets the same answer.
- Missing or unverifiable evidence is reported as **Unknown**: never a silent pass, never a silent fail.
- Pages that cannot be read are named, never skipped.
- Once the envelopes open, prices are scored and bids ranked by formula.

The AI assists

- A language model on your own hardware reads the shortlisted bids and quotes the passage that answers each requirement.
- It never makes a pass/fail call.
- When a quote's numbers differ from the requirement's, the call goes to a person.
- Text in a bid that looks like an instruction to an AI is flagged, and the affected calls go to a person.

Officers sign

- Officers confirm the requirements and decide every exclusion — always with a written reason.
- Evaluators score; a disputed call holds the award until the committee settles it.
- The approving authority finalises, and the decision record is signed with your entity's key.
- Every action is attributed to a named user in an append-only audit trail.

HOW ONE COMPLIANCE CALL IS MADE ILLUSTRATION

VENDOR	DOCUMENTS	PRICING	REQUIREMENTS LIKELY COVERED	SCREENING	DECISION
☐ Silverdune Electronics	Commercial Technical	1,950,000 AED	5/10 likely missing: R5, R6, R7, R8, R9	Review	—
☐ Northstar Office Systems	Commercial Technical	—	10/10	Screen out	—
☐ Ironwood Data Services	Commercial Technical	2,785,000 AED	0/10 likely missing: R1, R2, R3, R4, R5, R6, R7, R8 ...	Screen out	—
☐ Meridian Byte Solutions	Commercial Technical	2,380,000 AED	0/10 likely missing: R1, R2, R3, R4, R5, R6, R7, R8 ...	Screen out	—

Reasons before decisions

Screening shows which requirements look missing from each bid — or which envelope never arrived — so nobody excludes a bid without seeing why. The officer's decision and written reason are kept with it.

Rows from the screening page of the fictional tender on the cover. R1–R9 are the RFP's numbered requirements; a red envelope label means that envelope is missing.

Your tenders stay inside your network

BidGate installs on your own servers and works without an internet connection — the language model included.

SECURITY BUILT IN

- Named sign-in.** Active Directory over LDAPS with roles from directory groups, or local named users with logout and expiring sessions.
- Role-based access.** Officers, evaluators, approvers and auditors each see only what their role allows.
- Append-only audit trail.** Every action and every export is attributed to a named user.
- Hostile files contained.** Macros and active PDF content are rejected; documents are parsed in a separate, time-limited process; ClamAV scanning when connected.
- Air-gapped installation.** An offline bundle of pinned, checksummed packages and model files.
- Nothing leaves by default.** Portal monitoring and email notices are opt-in.

ARABIC AND ENGLISH, THROUGHOUT

Bid screening	فرز العروض
Shortlist	القائمة المختصرة
Review	للمراجعة
Price sealed	السعر مغلق

Labels as they appear in the console, in each language.

- The interface, notices, and the official report and PDF in Arabic and English, laid out right to left in Arabic.
- Arabic-only clauses are always flagged for a person's language review — never settled automatically.
- Scanned pages are read with Arabic and English OCR; pages that still can't be read are named.

A note on accreditation. BidGate supplies the application controls described here. Accreditation belongs to your complete operated system — servers, network and procedures — and is assessed by your own security team.

BidGate at a glance

BUILT FOR	Government and semi-government tenders, from a handful of bids to a hundred or more on one tender.
THE FLOW	RFP intake → screening → AI cross-check of the shortlist → committee scoring → two-envelope release → approval and signed award.
DEPLOYMENT	On your own Windows or Linux servers, with PostgreSQL. Air-gapped installation from an offline bundle.
AI	An open-weight language model running on your hardware. It proposes and quotes; it never decides.
SIGN-IN	Active Directory over LDAPS, with roles from directory groups, or local named users.
ROLES	Procurement officers, evaluators, approvers, auditors and administrators — each limited to what the role allows.
LANGUAGES	Arabic and English throughout: interface, notices, reports and PDFs.
DOCUMENTS IN	PDF, Word and text files; scanned pages through Arabic and English OCR.
RECORDS OUT	Recommendation report in Arabic and English (web and PDF), bid comparison and compliance spreadsheets, and an Ed25519-signed decision record.
AUDIT AND BACKUP	An append-only, attributed audit trail; AES-256-GCM encrypted backups with verified, non-overwriting restore.
PORTAL	No integration needed — bids arrive as one ZIP, a folder per bidder.

Request a demonstration

We'll walk your team through a complete sample tender on BidGate — from the portal's ZIP to the signed award.

ABOUT GP TECHNOLOGIES

GP Technologies is a Dubai-based AI solutions company. We build software that puts AI to work inside the systems our clients rely on. For government, that means software that runs on the entity's own infrastructure, keeps a named person accountable for every decision, and leaves a record anyone can check.

Recognised with the AI Seal
